## Status

live release

## Summary

Assorted filenames updated to match LIDO profile naming conventions; typo corrected in Export Structure for [Loan Assessment Group](#); minor edits to front matter, addition of hyperlinks; LIDO Terminology references updated to match latest release (n.b. *all LIDO Terminology URLs used within an EODEM document are unchanged*, but some term names, which may be used in <term> have changed); unreleased version 0.09 changes carried through (material-related units of information extended to include techniques; unit names updated accordingly); document finalised for release. Changes from version 0.08 (public beta) are itemised below.

## In detail

- EODEM document filenames updated to match established LIDO naming conventions.
- Typo corrected in Export Structure for [Loan Assessment Group](#): 'http://terminology.lido-schema.org/eventType/loan\_assessment' replaced with 'http://terminology.lido-schema.org/lido00795' as content of <conceptID>.
- Typo corrected in XPaths for [Relative Humidity Requirements Text](#): 'lido:eventObjectMeasurements[@lido:type='http://terminology.lido-schema.org/lido00923'][@lido:measurementsGroup='http://vocab.getty.edu/aat/300192097']/' replaced with 'lido:event[lido:eventType/lido:conceptID/text()='http://terminology.lido-schema.org/lido00794']/lido:eventObjectMeasurements[@lido:type='http://terminology.lido-schema.org/lido00923' and @lido:measurementsGroup='http://vocab.getty.edu/aat/300192097']/'.
- Case standardised in @xml:id for [Lender Group \[2: record source\]](#)
- Minor edits to front matter for clarity and to bring background information up to date.
- Hyperlinks added in front matter.
- Notional workflow diagram incorporated into document.
- LIDO Terminology vocabulary names and URLs, and term names, updated to match current version (n.b. *all LIDO Terminology URLs used within an EODEM document are unchanged*).
- The following LIDO Terminology vocabulary term names, which may appear in <term>, have been updated to match current version:
  - <http://terminology.lido-schema.org/lido00795> from 'loan assessment' to 'Object loan assessment'
  - <http://terminology.lido-schema.org/lido00794> from 'display' to 'Object display assessment'
  - <http://terminology.lido-schema.org/lido00793> from 'move of object (object requirements assessment)' to 'Object move assessment'
  - <http://terminology.lido-schema.org/lido00927> from 'Object property' to 'Measurement object proper'
  - <http://terminology.lido-schema.org/lido00923> from 'Object requirement' to 'Measurement object requirement'
- Unreleased version 0.09 changes carried through:
  - Namespace definitions added to structure of <lido:lidoWrap> in [EODEM Exchange](#).

- Example and content of <lido:applicationProfile> corrected from free text to URL, to match specified value, in [LIDO\\_Application\\_Profile](#).
- Materials Group renamed [Materials/Techniques Group](#) and description updated.
- Material Description renamed [Material/Technique Description](#) and description updated.
- Material Group renamed [Material/Technique Group](#) and description updated.
- Material/Technique Type added as a separate unit of information.
- Material Identifier renamed [Material/Technique Identifier](#) and description updated.
- Material Keyword renamed [Material/Technique Keyword](#) and description updated.
- Single examples reformatted as lists in:
  - [LIDO Record ID](#)
  - [URI](#)
  - [Object Type Identifier](#)
  - [Production Period Keyword](#)
  - [LIDO Record Type Identifier](#)
  - [LIDO Record Type Keyword](#)
  - [Maker Type](#)
  - Order of examples transposed in [Identifier Type](#).
- Document finalised for release.

## EODEM LIDO profile version 1.0

### CIDOC Documentation Standards Working Group

#### Resources

Links to current EODEM resources will always be available via the project's homepage at <https://cidoc.mini.icom.museum/working-groups/documentation-standards/eodem-home/>. For help and advice when implementing EODEM, please email [eodem-support@googlegroups.com](mailto:eodem-support@googlegroups.com).

#### Background

EODEM stands for Exhibition Object Data Exchange Model. The standard has been created to facilitate the export of data from the museum Collection Management System (CMS) of an institution lending an item to the CMS of the institution borrowing it. The standard recognises the variety of data appropriate to different items lent, the variety of data structures in CMSs, and the variety of quality of data recorded in CMSs in every sense.

The desirability and feasibility of the standard were discussed at a round table discussion between documentalists from the CIDOC Documentation Standards Working Group (DSWG) and system suppliers, held on 30 September 2018 at the CIDOC Annual Conference in Heraklion, where it was agreed that such a standard, if tightly circumscribed, could be feasible. The DSWG were asked to draft a data standard for review and discussion by the vendors.

Several outstanding questions were discussed and resolved at an online meeting on 27 February 2020, attended by:

- Maija Ekosaari (CIDOC DSWG)
- Norbert Kanter (Zetcom)
- Richard Light (Modes User Group)
- Rob Tice (Knowledge Integration)
- Rupert Shepherd (CIDOC DSWG)
- Sascha Curzon (Gallery Systems)

In particular, given the desirability of developing a standard for EODEM which was based upon existing standards which had already been incorporated into at least some CMSs, consideration was given to basing EODEM upon [LIDO](#) (the basis of the Europeana Inside mechanism added recently to several CMSs) and [Spectrum](#) (with which several CMSs are compliant). However, neither standard contained all the units of information identified as requirements for EODEM. A decision was made to adopt LIDO on the basis of its tighter definition in practice, recent use in several data aggregation projects, greater extensibility, and the opportunities provided by the

concurrent development of LIDO 1.1 to accommodate any particular needs identified for EODEM. Adopting LIDO in turn determined the base format for an EODEM file: XML, the established serialisation for LIDO.

The draft EODEM data description was mapped to LIDO version 1.1 and subsequently refined, and the resulting text document was converted to a single XML file and accompanying XSLT files, which can be used to generate:

- An EODEM XSD schema document
- An outline of an EODEM document's structure in HTML
- Human-readable EODEM documentation in HTML
- Human-readable EODEM documentation in PDF
- A sample EODEM XML file

This work was carried out in conjunction with the LIDO Working Group and the KONDA project, and managed at a series of regular online meetings attended variously by:

- Andrea Boyes (Axiell)
- Angela Kipp (Gallery Systems)
- David Cigánek (Axiell / Musoft)
- Fernando Cabral (Sistemas do Futuro Ltd)
- Jake Jones (RoxyArt.io)
- Jette Klein-Berning (Zetcom)
- Jonathan Whitson Cloud (CIDOC DSWG)
- Joshua Enslin (museum-digital)
- Liz Eckman (Gallery Systems)
- Maija Ekosaari (CIDOC DSWG)
- Maria Scherrers (Gallery Systems)
- Mary LaGue (Taubman Museum of Art)
- Mike Jones
- Mikko Sola (Userix Oy)
- Norbert Kanter (Zetcom)
- Regine Stein (LIDO WG)
- Richard Light (Modes Users Association)
- Rob Tice (Knowledge Integration)
- Rupert Shepherd (CIDOC DSWG)
- Saatu Haapakoski (Profium)
- Sara Kayser (KulturIT)
- Sascha Curzon (Gallery Systems)
- Sheila Carey (CHIN)

Further valuable feedback was provided by participants at a number of EODEM and LIDO workshops held online on

- 7 and 9 December 2020, as part of the CIDOC 2020 annual conference
- 22 and 24 May 2022, as part of the CIDOC 2021 annual conference

## Acknowledgements

Particular thanks are due to:

- Antonio Beecroft for assistance with vocabularies
- Eric Hagan for assistance with vocabularies
- Gordon McKenna for assistance with vocabularies
- Jette Klein-Berning for proof-of-concept and XSLT development and profile reviews
- Jonathan Ward for assistance with vocabularies
- Jonathan Whitson Cloud for the initial impetus and viewer hosting
- Kevin Gosling for assistance with vocabularies
- Lynne Harrison for assistance with vocabularies
- Maija Ekosaari for conference workshop organisation and facilitation
- Norbert Kanter for the initial idea and subsequent logo designs

- Richard Light for proof-of-concept, viewer and extensive XSLT development
- Rob Tice for the initial draft LIDO mapping
- Rupert Shepherd for coordinating meetings and drawing up various versions of the profile definition
- Sascha Curzon for viewer development
- Simon Lambert for assistance with vocabularies
- The LIDO Working Group, particularly Regine Stein, for advice and for altering LIDO version 1.1 to take account of EODEM's needs
- LIDO name and logo courtesy Rob Lancefield

## General principles

### Comprehensiveness

EODEM is intended to facilitate the exchange of the data that is actually stored in CMSs, rather than the data that ideally should be in CMSs. We have therefore taken care to set a standard that is not likely to be a barrier to the export or import of the required information. We recognise that, in many cases, the exporting and importing CMSs will have higher data standards than EODEM; at the same time, we fully expect that no single system will contain all the units of information specified in EODEM, let alone actually contain data in them.

Our aim has therefore been to strike a balance between ease of implementation, and being so prescriptive as to make it virtually impossible to provide usable data. One consequence of this is that very few EODEM fields are mandatory. The only mandatory fields that are likely to be populated from CMS data are:

1. Object Type Keyword
2. Title Type
3. Title/Name
4. Title Language
5. Object Identifier
6. LIDO Record Type Identifier
7. LIDO Record Type Keyword

(and even then, some fields, such as Title Type and Title Language, may actually be default values in some systems). The following fields are also mandatory, but will most likely be filled in using system values or defaults applied at the point of export:

1. LIDO Record ID
2. LIDO Application Profile
3. Record Language
4. Lender Name
5. Local Record ID
6. Export Date/Timestamp

In short, EODEM works on the principle that it is better to be able to automatically export and import some object data, than no object data at all.

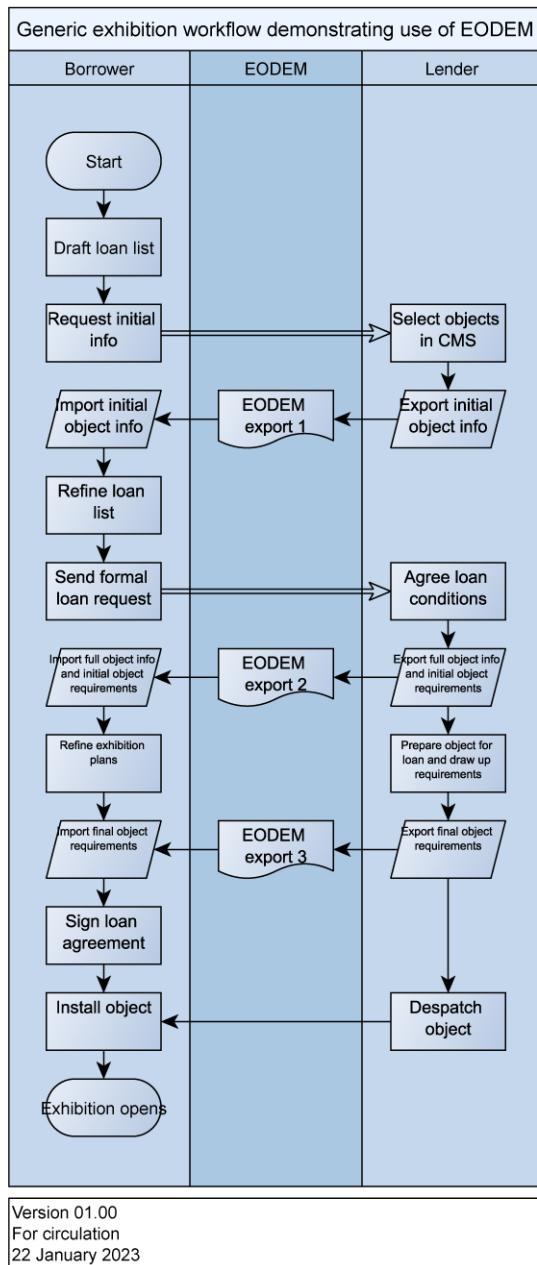

Different CMSs store different data in different ways, and to different levels of granularity. EODEM includes some units of information where the structure is very granular, and we acknowledge that not all vendors will be able to meet this level of granularity; we have always provided a free-text

alternative in such cases. Conceptually, we expect that different importers and exporters will be able to meet one of the following levels of granularity:

- Level 1: data as text only
- Level 2: granular / structured data
- Level 3: granular / structured data with all entities identified by resolvable Linked Data URIs

## Workflow

EODEM envisages that data for the same object is likely to be exported by a lender and imported by a borrower multiple times over the course of a loan: see the following notional workflow diagram.

This has a significant impact on how the receiving system should handle imports. It is likely that users will want the option to:

1. Overwrite existing data
2. Append to existing data

### 3. Import as an entirely new record

In this context, it is absolutely crucial that the data in [Export Date/Timestamp](#) is both accurate, and contains the required time zone value - and that importers take account of it.

## Data transformation on export and import

No EODEM unit of information may be re-purposed or re-labelled. If the exporting CMS holds data that matches a given unit of information, then it will be exported; if data does not match an EODEM unit of information, it will not be exported.

If data provided in EODEM cannot be accommodated in the receiving CMS, vendors might consider ways in which it can be dumped in a holding area, probably a free-text field. (They might also wish to consider adding the relevant units of information to their product in the next round of enhancements.)

[EODEM Object](#) will contain a single record representing either a single object, or a group of objects described as a group without being broken down into individual objects. [LIDO Record Type Group](#) identifies which is described. No further partitioning, grouping or membership is permitted, and therefore no properties should be taken to be inherited between objects.

Where an exporting CMS contains multiple instances of a unit of information for which EODEM specifies a single instance, then only the most appropriate (or failing that, the first) entry should be used. Concatenations of multiple terms are not acceptable.

Beyond the imposition of a very few controlled terminologies, EODEM does not envisage that data will be filtered or arranged prior to exchange. Examples given are in some cases intended to indicate how poor (in data standard terms) the acceptable data may be, and still remain useful.

Data types of individual units of information will vary from system to system, so the data types proposed below are purely indicative: they describe what we expect the data to look like. EODEM LIDO is serialised as XML, and so encodes all data as (Unicode) text. Individual system developers will therefore need to handle data type conversions on export and import to match their individual systems' requirements.

There are likely to be values which are not held explicitly in some CMSs, but which could be assumed for all objects or for definable groups of objects. Our expectation is that developers may be able to insert these directly into the data package upon export, rather than require the creation of new fields in their systems or ask clients to insert values into the package by hand. Equally, vendors may wish to make the allocation of some of these values definable by clients via their system's configuration settings.

## Controlled terminologies (and linked data)

EODEM mandates the use of very few controlled vocabularies or formats:

- [IANA media types list](#) : Image Type
- [IETF language code list](#) : Record Language, Title Language
- [ISO 4217 \(currencies\)](#): Value Currency
- [ISO 8601 \(dates\)](#): Earliest Production Date, Latest Production Date, Export Date/Timestamp
- [Individual SI units of measurement](#) for quantified (as opposed to free-text) environmental requirements

- **LIDO Terminology :**

- **actor\_type:** Maker Type
- **identifier\_type:** <...ID>/@type
- **pref:** @pref
- **recordType:** LIDO Record Type Identifier, LIDO Record Type Keyword
- **termMaterialsTech\_type:** Material/Technique Group

A few more are recommended but not mandated:

- **ISO 8601 (dates):** Maker Earliest Date, Maker Latest Date
- **SI units** and their abbreviations: **Unit**

In these cases, we expect that vendors will, wherever possible, convert local values to the standard upon export, and - if necessary - convert them back to their system's local values upon import. In most cases, such conversions are likely to be applied generically on export rather than change according to individual data values.

It may be that some vendors' clients would prefer that some terminology values were overwritten by a generic term reflecting the information's origin. For example, **Title Type** might always be changed to 'lender's title' upon import, regardless of the value in the exported data. This is permissible - but should, of course, be documented.

In addition, the adoption of LIDO as our data exchange format enables us, through the LIDO model of <conceptID> / <term> pairs, to refer to controlled vocabularies, if the relevant identifiers exist in data - with all the potential advantages that that might bring. We therefore encourage vendors, where individual clients have been able to apply external identifiers to data which can be included in an EODEM export, to include the relevant fields in their EODEM exports; and to take account of it when aligning data upon import.

However, EODEM does make extensive use of Linked Data identifiers within framing data, in order to identify which particular unit of information is being described. In nearly all cases, it should be possible to hard-code these into the exporter or importer. These are drawn from three sources:

- **AAT**
- **LIDO Terminology**
- **Spectrum**

The terms used are listed below, under '[Controlled terms used in EODEM](#)'.

## Languages

EODEM accepts that object records may be exchanged in more than one language at the same time. It is not the exporter's job to anticipate which language an importer may prefer: they should export records in whichever language is / languages are available in their system. However, it is a requirement of LIDO that a record's language must be explicitly labelled, using [Record Language](#).

EODEM further mandates that, rather than export one <descriptiveMetadata> block and assign multiple languages to the individual units within it, a separate <descriptiveMetadata> block should be exported for every language used. The only exception to this is for [Title/Names](#), where it is accepted that multiple titles may exist in different languages within a single descriptiveMetadata block; however, the individual languages should be specified using [Title Language](#).

It is therefore incumbent on the importer to decide either to accept records in all the languages offered, or to define a hierarchy of preferred languages, from which the highest will be imported; failing that, the next highest, and so on.

## Images and transfer of files

If an image is not represented by a URI, it is assumed that the image files will be provided alongside the EODEM XML file, and the image file's name will be defined in the **Image** field.

EODEM data for transfer will therefore comprise:

- 1 × XML file, meeting the standard for the EODEM profile of LIDO 1.1
- 0-n × image files

EODEM importers will expect to find a folder containing the files listed above - nothing else.

The EODEM standard does not mandate particular methods of transport (FTP, email, DropBox, etc.) Neither does it restrict the additional processing of files either before or after transfer - e.g. assembling XML and image files into a single ZIP archive prior to transfer. However, EODEM importers must be presented with a single folder containing the files listed above.

## Security

An EODEM file may contain sensitive information about one or more museum objects: valuations, security requirements, installation methods, etc. However, at the time of writing, this information is routinely transferred between borrowers and lenders in relatively insecure formats, i.e. as unencrypted email messages or in unencrypted files attached to email messages. Therefore, emailing EODEM data is no more or less secure than current common practice.

If lenders are concerned about the security of their data, we suggest that they wrap the EODEM files in a password-protected ZIP archive before transfer, and send the password to the borrower using a different channel from the one used to send the data. However, users should note that EODEM importers will not expect to deal with a ZIP archive - the files must be unpacked before running the importer (as per '[Transfer of files](#)' above).

## Schema presentation

EODEM is a profile of LIDO version 1.1; this document should be read in conjunction with the LIDO 1.1 specification, <http://lido-schema.org/schema/v1.1/lido-v1.1.html>.

The EODEM profile is presented as a series of units of information; these map to LIDO elements and attributes. The units of information are listed in the order in which they will appear within an EODEM profile. Each unit of information is presented as follows:

- The unit of information's name in natural language
  - **Description:** contains a short explanation of the unit of information.

- **Unit ID:** the identifier used to identify the unit of information within the profile definition XML document, and documents generated from them.
- **Examples:** one or more examples of the kind of data which might be contained within the unit of information.
- **How to record**
  - **Authority:** any controlled terminology to be used within the unit of information itself, or the surrounding LIDO XML that identifies it. These should be taken as mandatory unless explicitly labelled as recommended.
  - **Cardinality:** the defined occurrence of the unit of information, within its parent unit of information. Cardinality is inherited. In other words:
    - If the cardinality of the unit *and all its ancestors* is 1 or 1-n, then the unit of information is mandatory
    - If the cardinality of a unit is 1 or 1-n, but that of its parent is 0-n, then the unit must be included only if its ancestor elements are included.
  - **Content type:** the type of data encoded within the unit of information. This is either 'element', where the unit of information is a wrapper for descendant elements; or an indicative data type for the unit of information. Because EODEM is expressed in XML, all data is by definition expressed as Unicode text; nevertheless, certain units of information will expect data to be presented in the form of (say) a floating point or integer.
  - **Divergence from LIDO:** if any aspect of the unit of information diverges from the relevant element's definition in LIDO 1.1, this is identified here. This will take the form either of a more restrictive cardinality for, or restrictions on the terms that can be used within, the unit of information itself, or the surrounding LIDO XML that identifies it.
  - **XPath interchange:** an absolute XPath which can be used to retrieve all occurrences of the unit of information for all objects contained within a single EODEM document.
  - **XPath object:** a relative XPath which can be used to retrieve all occurrences of the unit of information for a single object contained within an EODEM document.
- **Export:** where to place the unit of information when creating an EODEM file:
  - **Context:** the parent unit of information within which the unit of information should be placed.
  - **Structure:** the components which make up the unit of information; these will be LIDO XML elements and attributes, and may include descendant units of information.

Units of information which are expressed solely as LIDO XML attributes may occur at multiple positions within an EODEM document, and so they have no information under Export; if their use is widespread, they will also have no information under XPath.

## Viewer

Developers and other users can preview valid EODEM files in a more human-readable form by uploading a file and accompanying image(s) to an online viewer at <https://cidoc-dswg.org/eodem/>.

# Controlled terms used in EODEM

The following terms are listed as an aide-memoire; in all cases, the term's source must be taken as authoritative.

## AAT

See <https://www.getty.edu/research/tools/vocabularies/aat/>.

### In alphabetical order

- duration: <http://vocab.getty.edu/aat/300443981>
- exposure (functional concept): <http://vocab.getty.edu/aat/300443982>

# Elements

## EODEM Exchange

### Description

A complete EODEM data exchange.

### Unit ID

EODEM\_Exchange

### How to record

#### Cardinality

1

#### Content type

element

#### XPath interchange

/lido:lidoWrap

### Export

#### Structure

```
<lido:lidoWrap>
  EODEM_Object
```

## EODEM Object

### Description

Information about a single object being described as part of an EODEM data exchange.

### Unit ID

EODEM\_Object

### How to record

#### Cardinality

1-n (only 1 per object)

#### Content type

element

XPath interchange

/lido:lidoWrap/lido:lido

XPath object

lido:lido

## Export

Context

EODEM Exchange

Structure

```
<lido:lido>
  LIDO_Record_ID
  URI
  LIDO_Application_Profile
  Object_Metadata
  Administrative_Metadata
```

# LIDO Record ID

## Description

A unique identification of the LIDO record, preferably composed of an identifier for the contributor and a record identification in the contributor's (local) system.

## Unit ID

LIDO\_Record\_ID

## Examples

- NG-object-4077

## How to record

### Authority

lidoRecID @type

any numeric URI from LIDO Terminology:  
identifier\_type

### Cardinality

1

### Content type

character data: string

### Divergence from LIDO

- cardinality (LIDO: 1-n)
- controlled terminology in lidoRecID @type (LIDO: various values allowed)

## XPath interchange

/lido:lidoWrap/lido:lido/lido:lidoRecID/text()

## XPath object

lido:lido/lido:lidoRecID/text()

## Export

### Context

EODEM Object

### Structure

```
<lido:lidoRecID lido:type="Identifier_Type">
```

# URI

## Description

Any 'cool' (persistent and dereferenceable) URI assigned to the item.

## Unit ID

URI

## Examples

- <https://data.ng-london.org.uk/0F6J-0001-0000-0000>

## How to record

### Authority

objectPublishedID @type only one value is permitted: <http://terminology.lido-schema.org/lido00099><sup>3</sup>

### Cardinality

0-1

### Content type

character data: string

### Divergence from LIDO

- cardinality (LIDO: 0-n)
- controlled terminology in objectPublishedID @type (LIDO: various values allowed)

## XPath interchange

/lido:lidoWrap/lido:lido/lido:objectPublishedID/text()

---

<sup>3</sup> LIDO numeric URI for LIDO Terminology term 'URI'.

## XPath object

lido:lido/lido:objectPublishedID/text()

## Export

### Context

EODEM Object

### Structure

```
<lido:objectPublishedID lido:type="Identifier_Type">
```

# LIDO Application Profile

## Description

The LIDO profile to which this record adheres; by definition, this must be a version of the EODEM profile.

## Unit ID

LIDO\_Application\_Profile

## Examples

element	<a href="https://lido-schema.org/schema/v1.1/lido-v1.1-profile-EODEM-v1.0.xsd">https://lido-schema.org/schema/v1.1/lido-v1.1-profile-EODEM-v1.0.xsd</a>
---------	---------------------------------------------------------------------------------------------------------------------------------------------------------

## How to record

### Authority

Only one value is permitted: <https://lido-schema.org/schema/v1.1/lido-v1.1-profile-EODEM-v1.0.xsd>

### Cardinality

1

### Content type

character data: string

### Divergence from LIDO

- cardinality (LIDO: 0-1)

<lido:conceptID lido:type="http://terminology.lido-schema.org/lido00099">
```

# Object Type Keyword

## Description

The narrowest meaningful attribution of type that can be appropriately applied to the whole of the item.

### Unit ID

Object\_Type\_Keyword

## Examples

- paintings
- chair
- model
- specimen
- sample
- suit of armour

## How to record

### Authority

term @pref

any numeric URI from LIDO Terminology: pref

### Cardinality

1-n

### Content type

character data: string

### Divergence from LIDO

- cardinality (LIDO: 0-n)
- controlled terminology in term @pref (LIDO: various values allowed)

### XPath interchange

`/lido:lidoWrap/lido:lido/lido:descriptiveMetadata/lido:objectClassificationWrap/  
lido:objectWorkTypeWrap/lido:objectWorkType/lido:term/text()`

### XPath object

lido:lido/lido:descriptiveMetadata/lido:objectClassificationWrap/  
lido:objectWorkTypeWrap/lido:objectWorkType/lido:term/text()

## Export

## Context

## Object Type Group

# Structure

## <lido:term>

# Title/Name Group

## Description

Containing element for the name by which the object is widely known, and information describing it.

## Unit ID

## TitleName\_Group

# How to record

## Authority

titleSet @pref

any numeric URI from LIDO Terminology: pref<sup>4</sup>

## Cardinality

1

## Content type

## element

## Divergence from LIDO

- cardinality (LIDO: 1-n)
  - controlled terminology in titleSet @pref (LIDO: various values allowed)

## XPath interchange

lido:titleWrap/lido:titleSet

## XPath object

lido:lido/lido:descriptiveMetadata/lido:objectIdentificationWrap/lido:titleWrap/lido:titleSet

## Export

<sup>4</sup> @pref will be ignored by importers, because only one term is permissible here in EODEM.

## Context

### Object Metadata

## Structure

```
<lido:titleSet lido:type="Title_Type">  
  TitleName
```

# Title/Name

## Description

The name by which the item is widely known. For works of artistic creation this may be ascribed by the creator. For natural history specimens, this is likely to be the scientific names of a genus or species name. More than one instance may be recorded where the item is widely known by multiple title/names or where the title name has been recorded in multiple languages.

## Unit ID

TitleName

## Examples

- Bacchus and Ariadne
- Washington Crossing the Delaware
- Untitled
- The Rosetta Stone
- Odobenus rosmarus
- Napoleon's hat

## How to record

## Brief Description

### Description

A block of text that identifies the item and ideally distinguishes it from other similar examples. Content will however vary considerably. The field is not intended as a dumping ground for favoured fields not included elsewhere in the standard, but it may be used in that way.

### Unit ID

Brief\_Description

### Examples

- One of the most famous paintings in the National Gallery, Titian's Bacchus and Ariadne illustrates a story told by the classical authors Ovid and Catullus. The Cretan princess Ariadne has been abandoned on the Greek island of Naxos by Theseus, whose ship sails away in the distance. Bacchus, god of wine, falls in love at first sight with Ariadne and leaps from his chariot towards her. Later, Bacchus throws Ariadne's crown into the air, immortalising her as the constellation Corona Borealis, represented by the stars above her head. This painting is one of a celebrated series by Giovanni Bellini, Titian and the Ferrarese artist Dosso Dossi, commissioned for the Camerino d'Alabastro (Alabaster Room) in the Ducal Palace, Ferrara, by Alfonso I d'Este, Duke of Ferrara. All the pictures, completed from 1514 to 1525, are bacchanals – scenes of hedonism, drinking, music making and lovemaking. Titian shows off his great skill as a colourist, combining in this single picture all of the purest and most vibrant pigments available at that time.
- Painting of a man in the prow of a crowded boat, looking back and pointing forwards.
- A blue spoon with a long handle
- 25 Athenian Owls

- An overstuffed taxidermy walrus.

## How to record

## Export

### Context

Measurement Group

### Structure

```
<lido:objectMeasurements>
  Dimension_Group
  Dimension_Aspect
  Dimension_Qualifier
```

## Dimension Group

### Description

One dimension, expressed as a type ('height', etc.), unit, and value. The measurements of a particular aspect of the object are recorded within a [Dimension Aspect Group](#); each Dimension Aspect Group will include multiple [Dimension Groups](#) (e.g. one each for height, width and depth).

### Unit ID

Dimension\_Group

### How to record

#### Cardinality

1-n; but if a [Dimension Aspect Group](#) is given, then [Dimension Group](#) must be included

#### Content type

element

### XPath interchange

/lido:lidoWrap/lido:lido/lido:descriptiveMetadata/lido:objectIdentificationWrap/  
lido:objectMeasurementsWrap/lido:objectMeasurementsSet/  
lido:objectMeasurements/lido:measurementsSet

### XPath object

lido:lido/lido:descriptiveMetadata/lido:objectIdentificationWrap/  
lido:objectMeasurementsWrap/lido:objectMeasurementsSet/  
lido:objectMeasurements/lido:measurementsSet

## Export

### Context

Dimension Aspect Group

### Structure

```
<lido:measurementsSet>  
  Dimension  
  Unit  
  Measurement
```

## Dimension

### Description

The dimension measured for which the [Measurement](#) applies. This should not include the part/s measured, which are specified in [Dimension Aspect](#). Dimension is a highly subjective attribute, and without some indication of the orientation of the item when measured, often useless, but is a commonplace in item measurements and has just about sufficient utility to warrant inclusion.

### Unit ID

Dimension

### Examples

- width
- height
- depth
- diameter
- duration

schema.org/lido00028']/lido:eventDate/lido:displayDate/text()
```

## Export

### Context

[Production Date Group](#)

### Structure

```
<lido:displayDate>
```

## Earliest Production Date

## Description

The earliest possible production date for the object, expressed in numbers only.

## Unit ID

Earliest\_Production\_Date

## Examples

- 1520
- 2018-10-03
- 1965
- -579

## How to record

### Authority

Use the proleptic Gregorian calendar; dates must be formatted in accordance with ISO 8601.<sup>12</sup>

### Cardinality

0-1; but if a date is given, then either **Display Production Date**, or **Earliest Production Date** and **Latest Production Date**, or both must be included.

### Content type

character data: string

### Divergence from LIDO

restricted format (LIDO: various formats allowed)

### XPath interchange

/lido:lidoWrap/lido:lido/lido:descriptiveMetadata/lido:eventWrap/lido:eventSet/lido:event[lido:eventType/lido:conceptID/text() = 'http://terminology.lido-schema.org/lido00028']/lido:eventDate/lido:date/lido:earliestDate/text()

### XPath object

# Condition Checking

## Description

Any instructions or requirements for the condition-checking of the item.

## Unit ID

Condition\_Checking

## Examples

- The NG shall prepare condition reports for the Paintings.
- must be condition-checked by an accredited conservator upon unpacking and re-packing

## How to record

### Authority

eventDescriptionSet @type      only one value is permitted: [http://purl.org/  
spectrum/units/condition-checking-requirements](http://purl.org/spectrum/units/condition-checking-requirements)  
<sup>29</sup>

### Cardinality

eventDescriptionSet	0-n
descriptiveNoteValue	0-n

### Content type

character data: string

### Divergence from LIDO

<sup>29</sup> PURL for Spectrum candidate unit of information 'condition checking requirements'.

controlled terminology in eventDescriptionSet @type (LIDO: various values allowed)

[Relative\\_Humidity\\_Requirements\\_Text](#)

[Relative\\_Humidity\\_Requirements\\_Measurements\\_Group](#)

<sup>47</sup> Numeric URI for LIDO Terminology term 'Measurement object requirement'.

<sup>48</sup> URI for AAT term 'relative humidity'.

# Relative Humidity Requirements Text

## Description

The relative humidity, usually a range, the item should be stored and displayed in. If two different variation values are required, for example, over 24 hours or over the period of the loan, then these should be included in two different objectMeasurementsSet blocks.

## Unit ID

Relative\_Humidity\_Requirements\_Text

## Examples

- 50-60% ± 5% over 24 hours if the object is installed in a room equipped with an operating Heating Ventilation and Air-Conditioning (HVAC) system
- 40%-65%

## How to record

### Cardinality

0-1; but if relative humidity requirements are given, then either [Relative Humidity Requirements Text](#) or [Relative Humidity Requirements Measurements Group](#) or both must be included.

### Content type

character data: string

### Divergence from LIDO

cardinality (LIDO: 0-n)

### XPath interchange

```
/lido:lidoWrap/lido:lido/lido:descriptiveMetadata/lido:eventWrap/lido:eventSet/

Photography\_And\_Filming

## Examples

- Filming and/or photography of the Paintings, packing cases or hanging methods is not permitted at any time during packing or unpacking, condition checking, installation or de -installation, when the loan is being handled in transit, or in any other circumstances where in the courier's opinion the safety of the painting might thereby be compromised. The Borrower shall apply to the National Gallery Picture Library ([www.nationalgalleryimages.co.uk](http://www.nationalgalleryimages.co.uk)) for permission to reproduce images for the exhibition catalogue and any exhibition related publications as well as for non-commercial, archival, educational and promotional purposes. The Borrower shall obtain images from the National Gallery Picture Library. The NG owns the copyright in all photographic material supplied in whatever format , including digital. The Borrower shall apply to the National Gallery Picture Library for information regarding copyright and the terms and conditions for reproduction and colour transparency hire. The Borrower shall send 2 copies of the exhibition catalogue or related publication to the NG Registrar.

- no technical photography allowed
- no flash photography
- all film and photography lighting to be included total cumulative lux exposure

## How to record

### Authority

eventDescriptionSet @type only one value is permitted: <http://purl.org/spectrum/units/imaging-requirements><sup>84</sup>

### Cardinality

## Export

### Context

Lender Group [2: record source]

### Structure

```
<lido:legalBodyName>
  <lido:appellationValue>
```

## Export Date/Timestamp

### Description

A machine-generated date and time stamp in ISO 8601 format; the value must include the time zone in force when the stamp was created. Required to manage multiple, successive exports and imports.

### Unit ID

Export\_DateTimestamp

### Examples

- 2020-06-02T22:51:55+01:00
- 2018-10-17T20:25:01Z
- 2018-10-17T20:25:01+03:00

### How to record

#### Authority

recordInfoSet @type

only one value is permitted: <http://terminology.lido-schema.org/lido00470><sup>88</sup>

recordMetadataDate

value must provide a full date and time, with time zone information, compliant with ISO 8601<sup>89</sup>

<sup>88</sup> Numeric URI for LIDO Terminology term 'LIDO record'.

<sup>89</sup> For an introduction, see [https://en.wikipedia.org/wiki/ISO\\_8601](https://en.wikipedia.org/wiki/ISO_8601).

recordMetadataDate @type only one value is permitted: <http://terminology.lido-schema.org/lido00472><sup>90</sup>

### Cardinality

recordInfoSet	1
recordMetadataDate	1

### Content type

character data: date/time

### Divergence from LIDO

- cardinality recordInfoSet (LIDO: 0-n)
- cardinality recordMetadataDate (LIDO: 0-n)
- controlled vocabulary in recordInfoSet @type (LIDO: various values allowed)
- controlled vocabulary in recordMetadataSet @type (LIDO: various values allowed)
- restricted format in recordMetadataSet (LIDO: various formats allowed, but Schematron will warn if not a full ISO 8601 date/time with time zone)

### XPath interchange

/lido:lidoWrap/lido:lido/lido:administrativeMetadata/lido:recordWrap/  
lido:recordInfoSet[@lido:type='http://terminology.lido-schema.org/lido00470']/

lido00472']/text()

### XPath object

lido:lido/lido:administrativeMetadata/lido:recordWrap/  
lido:recordInfoSet[@lido:type='http://terminology.lido-schema.org/lido00470']/  
lido:recordMetadataDate[@lido:type='http://terminology.lido-schema.org/  
lido00472']/text()

## Export

### Context

Administrative Metadata

### Structure

```
<lido:recordInfoSet lido:type="http://terminology.lido-schema.org/  
lido00470">  
  <lido:recordMetadataDate lido:type="http://terminology.lido-schema.org/  
lido00472">
```

## Image Group

### Description

---

<sup>90</sup> Numeric URI for LIDO Terminology term 'created'.

Containing element for information relating to any associated images also being exchanged. The Image Group is intended to manage the transfer of identification images, not publication-quality images, and rights-related information is out of its scope. We recommend that such information, if required, be embedded in the image file metadata header.

## Unit ID

Image\_Group

## How to record

### Cardinality

resourceWrap	0-1
resourceSet	0-n
resourceRepresentation	0-n

### Content type

element

### XPath interchange

/lido:lidoWrap/lido:lido/lido:administrativeMetadata/lido:resourceWrap/  
lido:resourceSet

### XPath object

lido:lido/lido:administrativeMetadata/lido:resourceWrap/lido:resourceSet

## Export

### Context

Administrative Metadata

### Structure

```
<lido:resourceSet>
  <lido:resourceRepresentation lido:type="http://terminology.lido-schema.org/
    lido00464">
    Image
```

## Image

### Description

The file name or, preferably, the URI of any associated images also being exchanged.

## Unit ID

Image

## Examples

- N-0035-00-000177-wpu.jpg
- <https://museum.exchange.images/loan123/chair-reverse.tif>
- IMG12345.jpg

## How to record

### Authority

linkResource	the name of an individual file containing an image of the object and which accompanies the EODEM XML file, expressed without any qualifying path, or (ideally) an accessible URL pointing to an image of the object
@pref	any numeric URI from <a href="#">LIDO Terminology</a> : pref <sup>91</sup>

### Cardinality

1

### Content type

character data: string

### Divergence from LIDO

controlled vocabulary in @pref (LIDO: various values allowed)

### XPath interchange

```
/lido:lidoWrap/lido:lido/administrativeMetadata/lido:resourceWrap/
lido:resourceSet/lido:resourceRepresentation[@lido:type='http://
terminology.lido-schema.org/lido00464']/lido:linkResource/text()
```

### XPath object

```
lido:lido/lido:administrativeMetadata/lido:resourceWrap/lido:resourceSet/
lido:resourceRepresentation[@lido:type='http://terminology.lido-schema.org/
lido00464']/lido:linkResource/text()
```

## Export

### Context

Image Group

### Structure

```
<lido:linkResource lido:formatResource="Image_Type">
```

---

<sup>91</sup> @pref will be ignored by importers, because only one term is permissible here in EODEM.

# Attributes

## Identifier Type

### Description

The type of identifier being shared – either a local identifier, a URI, or an IRI.

### Unit ID

Identifier\_Type

### Examples

- <http://terminology.lido-schema.org/lido00099>
- <http://terminology.lido-schema.org/lido00100>

### How to record

#### Authority

Only terms from below [http://terminology.lido-schema.org/identifier\\_type](http://terminology.lido-schema.org/identifier_type) in LIDO Terminology are permitted; these may be further restricted as a result of the precise context in which this attribute is used, in which case the restriction is noted under the containing element.

#### Cardinality

1

#### Content type

character data: string

#### Divergence from LIDO

controlled terminology (LIDO: various values are allowed)

## Material/Technique Type

### Description

Whether the identifier and / or keywords describes a material or a technique.

### Unit ID

MaterialTechnique\_Type

### Examples

- <http://terminology.lido-schema.org/lido00132>

### How to record

#### Authority

termMaterialsTech @type	any numeric URI from LIDO Terminology: <a href="#">termMaterialsTech_type</a>
-------------------------	----------------------------------------------------------------------------------

### Cardinality

0-1

### Content type

character data: string

### Divergence from LIDO

controlled terminology in termMaterialsTech @type (LIDO: various values allowed)

### XPath interchange

```
/lido:lidoWrap/lido:lido:descriptiveMetadata/lido:objectIdentificationWrap/
lido:objectMaterialsTechWrap/lido:objectMaterialsTechSet/lido:materialsTech/
lido:termMaterialsTech/@lido:type="#"
```

### XPath object

```
lido:lido/lido:descriptiveMetadata/lido:objectIdentificationWrap/
lido:objectMaterialsTechWrap/lido:objectMaterialsTechSet/lido:materialsTech/
lido:termMaterialsTech/@lido:type="#"
```

## Maker Type

### Description

The type of maker being described: person, organisation, etc. For a culture or a state, use the value for 'group of persons'

### Unit ID

Maker\_Type

### Examples

- <http://terminology.lido-schema.org/lido00163>

### How to record

#### Authority

actor @type	any numeric URI from LIDO Terminology: <a href="#">actor_type</a>
-------------	----------------------------------------------------------------------

#### Cardinality

0-1

#### Content type

character data: string

#### Divergence from LIDO

controlled terminology in actor @type (LIDO: various values allowed)

### XPath interchange

```
/lido:lidoWrap/lido:lido/lido:descriptiveMetadata/lido:eventWrap/lido:eventSet/  
lido:event[lido:eventType/lido:conceptID/text() = 'http://terminology.lido-  
schema.org/lido00028']/lido:eventActor/lido:actorInRole/lido:actor/@lido:type
```

### XPath object

```
lido:lido/lido:descriptiveMetadata/lido:eventWrap/lido:eventSet/  
lido:event[lido:eventType/lido:conceptID/text() = 'http://terminology.lido-  
schema.org/lido00028']/lido:eventActor/lido:actorInRole/lido:actor/@lido:type
```

## Title Type

### Description

The type of name or title being recorded.

### Unit ID

Title\_Type

### Examples

- title
- scientific name
- supplied title
- lender's title
- former title

### How to record

#### Cardinality

1-n

#### Content type

character data: string

### XPath interchange

```
/lido:lidoWrap/lido:lido/lido:descriptiveMetadata/lido:objectIdentificationWrap/  
lido:titleWrap/lido:titleSet/@lido:type
```

### XPath object

```
lido:lido/lido:descriptiveMetadata/lido:objectIdentificationWrap/lido:titleWrap/  
lido:titleSet/@lido:type
```

## Record Language

### Description

The language of the overall object record or administrative record.

## Unit ID

Record\_Language

### Examples

- en-GB
- fr
- sa
- tlh
- und

### How to record

#### Authority

IETF language code list.

#### Cardinality

1

#### Content type

character data: string

#### Divergence from LIDO

controlled terminology (LIDO: various values are allowed)

#### XPath interchange

/lido:lidoWrap/lido:lido/lido:descriptiveMetadata/@xml:lang|/lido:lidoWrap/  
lido:lido/lido:administrativeMetadata/@xml:lang

#### XPath object

lido:lido/lido:descriptiveMetadata/@xml:lang|lido:lido/  
lido:administrativeMetadata/@xml:lang

## Title Language

### Description

The language of a specific title.

## Unit ID

Title\_Language

### Examples

- en-GB
- fr
- sa
- tlh
- und

### How to record

### Authority

IETF language code list.

### Cardinality

1

### Content type

character data: string

### Divergence from LIDO

controlled terminology (LIDO: various values are allowed)

### XPath interchange

/lido:lidoWrap/lido:lido/lido:descriptiveMetadata/lido:objectIdentificationWrap/  
lido:titleWrap/lido:titleSet/lido:appellationValue/@xml:lang

### XPath object

lido:lido/lido:descriptiveMetadata/lido:objectIdentificationWrap/lido:titleWrap/  
lido:titleSet/lido:appellationValue/@xml:lang

## Image Type

### Description

The type of any associated images being exchanged.

### Unit ID

Image\_Type

### Examples

image/jpeg

### How to record

#### Authority

Only terms from the official IANA list are permitted.<sup>92</sup>

#### Cardinality

0-1

#### Content type

character data: string

#### Divergence from LIDO
